## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-22 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Berrian et al. Berrian et al. teaches an ion implantation and beam controlling device comprising an ion beam source (Fig. 9 Item 92, 96), a dose control means for varying the intensity and dose of an ion beam (Fig. 6 Item 118), a beam modifier and detection means for determining the intensity and direction of a beam in the form of a Faraday detector (See Fig. 4 and Fig. 9 Item 106 and 124), a beam uniformity display means operatively connected to the uniformity control means for maintaining beam uniformity (Fig. 9 Item 124), a drive means (Fig. 9 Item 108) controlling the position of said Faraday detector in any of a plurality of parallel beam paths (Fig. 4 and Fig. 6, note motion of Faraday detector along axis perpendicular to beam path and intersection of detector path with beam), and a control means in the form of a computer (Fig. 9 Item 120).

### *Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patent 5811823 teaches the state of the art of an ion implantation technique and apparatus.
